SQL Lab #2:

1. List the names of the shippers that shipped orders to London for orders created in March, 2011.

2. Show how many products are in each product category. Add a row with the total number of products.

3. For each shipper, display the total number of customers from the UK who placed orders, the total number of orders placed from that customers, and the total number of products ordered.

4. Show how many products each supplier with ID lower than 11 has in each product category. Show the results sorted by supplierid. Display supplierid, category name, and the number of products.

5. Display orders with a total price higher than 10,000. Show the order id and total price.

6. Display all employees in hierarchically-ordered list. Show employee id, name, title, the employee to which he/she reports to, and level in the hierarchy. Use padding for better formatting.
